INOX CONTAINER HOLDER

Includes plugs to prevent insect nesting

ALT: 149 cm
(22 cm for recess)
WIDTH: 153 cm

This is an element that holds and prevents the containers from moving, either due to the effect of the wind, or the place where they are located, such as sloping streets or areas close to the road. They also help us keep containers in order and in a predetermined place.

Support chassis made of square tubular profile of different sizes, secured with mechanical fixings.

Front folding arm in round stainless steel tube of 40 x 1.5 mm. This arm can be disassembled, if necessary, by a larger one to be able to hold the folding lid containers of 1000 lts., Without having to change all the support.
It also facilitates repairs in case you need to replace the fastening arm with a new one.

Very quick and simple assembly.

Installation: sandwiched with concrete, optionally you can supply a few feet to fix it to the pavement by means of a chemical block and threaded rods.
